Preface to the Series, ix

Preface to This Volume, xi

Chapter 0: Preliminaries, 1

- Background, 1
- Matrices, 4
- Equivalence Relations and Partitions, 12
- Canonical Forms and Invariants, 19

Part I—Basic Theory, 25

Chapter 1: Vector Spaces, 27

- Mathematical Structures, 27
- Algebraic Structures, 27
- Vector Spaces, 34
- Linear Combinations, 37
- Subspaces, 39
- The Family of All Subspaces of a Vector Space, 41
- External Direct Sums, 46
- Internal Direct Sums, 49
- Essentially Unique Representation of Vectors, 54
- Spanning Sets, 54
- Minimal Spanning Sets, 57
- Linear Independence, 59
- Bases, 61
- Existence of Bases, 62
- The Dimension of a Vector Space, 64
- The Field Independence of Linear Independence, 68
- The Row, Column and Null Spaces of a Matrix, 69
- *The Complexification of a Real Vector Space, 71
- Exercises, 73

Chapter 2: Linear Transformations I, 77

- Linear Transformations, 77
- Isomorphisms, 82
- Linear Transformations As Representations, 85
- The Kernel and Range of a Linear Transformation, 86
- The Rank–Nullity Theorem, 88
- More on Rank, 89
- The Direct Sum of Linear Transformations, 92
- Matrix Transformations, 93
- The Matrix Representation of a Vector, 97
- Change of Representation For Vectors, 99

The Matrix Representation of a Linear Transformation, 103
Change of Representation for Linear Transformations, 107
Equivalence of Matrices, 110
Similarity of Matrices, 111
*Similarity of Operators, 115
Invariant Subspaces and Reductions of an Operator, 118
Projection Operators, 121
Exercises, 123

Chapter 3: Linear Transformations II, 129

Linear Functionals and Dual Spaces, 129
Annihilators, 135
Dual Maps, 137
Quotient Spaces, 140
The Correspondence Theorem, 148
The Isomorphism Theorems, 151
Exercises, 153

Chapter 4: Eigenvalues and Eigenvectors, 155

Eigenvalues and Eigenvectors, 155
The Characteristic Polynomial, 162
Diagonalizability, 171
Exercises, 175

Part II—Inner Product Spaces, 179

Chapter 5: Inner Product Spaces I, 181

The Adjoint of a Matrix, 181
Inner Products, 182
The Gram Matrix of an Inner Product, 185
Properties of the Inner Product, 190
Norm and Distance, 191
Orthogonality, 194
Orthogonal Projections and Best Approximations, 198
The Projection Theorem, 200
Least Squares Solutions, 200
Gram–Schmidt Orthogonalization, 205
Characterizing Orthonormal Bases, 211
Change of Orthonormal Basis, 212
Existence of Orthonormal Bases, 214
Exercises, 216

Chapter 6: Inner Product Spaces II, 219

The Riesz Representation Theorem, 219
The Adjoint of a Linear Operator, 222
Isometries, 227
*The QR Factorization, 229
Exercises, 232

Part III—Spectral Theory and Canonical Forms, 299

Chapter 7: The Minimal Polynomial and the Primary Decomposition, 237

Operator Modules and Annihilators, 237
The Minimal Polynomial of a Linear Operator, 243
Diagonalizability and the Minimal Polynomial, 249
Where Are the Complete Similarity Invariants?, 250
The Primary Decomposition, 252

The Cayley–Hamilton Theorem, 256
 Exercises, 261

Chapter 8: Schur's Theorem and the Spectral Theorem, 299

Unitary Similarity, 265
 When The Minimal Polynomial Splits, 267
 When The Minimal Polynomial Does Not Split, 273
 Summary, 280
 Normal Operators, 280
 Special Types of Normal Operators, 284
 Self-Adjoint Operators, 285
 Unitary Operators, 286
 Characterizing Self-Adjoint and Unitary Operators, 287
 *Functional Calculus, 289
 *Positive Operators, 292
 *Unitary Similarity in \mathbb{R} and \mathbb{C} , 295
 Exercises, 296

Chapter 9: Canonical Forms, 299

Introduction, 299
 Cyclic Subspaces, 300
 Isomorphisms of Operator Modules, 302
 The Primary Cyclic Decomposition of an Operator Module, 305
 Elementary Divisors, 313
 Companion Matrices, 315
 The Invariant Factor Decomposition of an Operator Module, 316
 Rational Canonical Form, 319
 Computing the Rational Canonical Form, 323
 The Jordan Canonical Form, 325
 Exercises, 331

Part IV—Topics, 335

Chapter 10: Uniqueness of Reduced Row Echelon Form, 337

Chapter 11: Determinants, 341

Permutations, 342
 The Permutation Definition of the Determinant, 345
 The Multilinear-Form Definition of the Determinant, 353
 The Cofactor Definition of the Determinant, 355
 Exercises, 358

Chapter 12: The LDU Factorization, 361

Principal Submatrices and Principal Minors, 361
 The LU Factorization, 361
 The LDU Factorization, 366
 Matrix Congruence and Sylvester's Law of Inertia, 368
 Exercises, 372

Chapter 13: The Polar and Singular Value Decompositions, 375

The Polar Decomposition of an Operator, 375
 The Singular Value Decomposition, 376
 The Moore–Penrose Generalized Inverse, 381
 Exercises, 382

Chapter 14: Tensor Products, 385

Bilinearity, 385
 Defining the Tensor Product Using Bases, 388

When Is a Tensor Product Zero?, 391
A Basis-Free Definition of the Tensor Product, 392
Exercises, 394

Chapter 15: Modules: The Vector Space Appreciation Chapter, 395

Modules, 395
Submodules, 396
Spanning Sets, 396
Linear Independence, 398
Torsion Elements, 398
Free Modules, 398
Modules Are Not as Nice as Vector Spaces, 401
Exercises, 401

Appendix A: Cardinality, 403

Cardinality, 403
Cardinal Arithmetic, 405

Appendix B: Partially Ordered Sets, 407

Partially Ordered Sets, 407
Zorn's Lemma, 410
Lattices, 411
Intersection Structures, 414
Final Remarks, 416
Exercises, 416

Selected Solutions, 419
